Streams & collects

```
public class Week_10_Labs {
    public static void Main(String[] args) {

        List<String> Fruit = Array.asList(...);
```

"apple", "ca

// 1. collect elements into a set
* No duplicates

// list.stream() → [do stuff] → .collect()

i.e filter, map

collect elements of fruit into a set

fruit.stream().collect

~~fruit.stream().collect(collectors.toSet~~

~~fruit.stream().collect(collectors.toSet(Set<String myfruits))~~

```
Set<String> myFruits = fruit.stream().collect(
                        Collectors.toSet());
```

FINAL:

```
Set<String> MyFruits = stream().collect(Collectors.
                                        toSet(
```

.stream()
"Start the belt"

[do stuff]

filter()

map()

.collect()
* grabs result
* always at the end

.collectors.toSet()

puts listener down the pipe into the set
